## How to grow

#### Fertilization <sup>1</sup>

**Nitrogen:** standard advice. **Phosphate:** standard advice.

Potassium: standard advice + 10%.

#### Seed treatment

Proper pre-sprouting after taking off the top sprout can give a positive result on the tuber set.Desprouting more than once can have a negative impact on yield and size regularity.

#### Planting distance

28/35 mm: 25 cm (54.000 plants/ha) 35/50 mm: 30 cm (45.000 plants/ha)

<sup>1</sup> Level of fertilization is based on soil analysis.

#### Weeds

A standard use of metribuzin (Sencor), before or after emerge, can give some foliage reaction, but rarely any yield reduction.

#### **Fungicides**

A strict preventive spraying schedule against late blight is necessary.

#### **Harvest**

Due to its sensitivity scores for black spot and/or harvest damage, wait at least three weeks after haulm killing before harvest.
