How to grow

Fertilization ¹

Nitrogen: standard advice.Preferably as split application, second treatment shortly after tuberization.

Phosphate: standard advice. **Potassium:** standard advice.

Seed treatment

Preferably plant the tubers into warm soil, as the initial development of this variety is slow.Desprouting can have a negative impact on yield and size regularity.A short heat shock or proper pre-sprouting is recommended.

Planting distance

28/35 mm: 22 cm (60.500 plants/ha) 35/55 mm: 27 cm (49.500 plants/ha)

¹ Level of fertilization is based on soil analysis.

Weeds

A standard use of metribuzin (Sencor), before or after emerge, doesn't give foliage reaction or yield reduction.

Fungicides

Despite the late blight resistance, remain alert for infections.

Harvest

Due to its sensitivity scores for black spot and/or harvest damage, wait at least three weeks after haulm killing before harvest.
