How to grow

Fertilization ¹

Nitrogen: standard advice - 25%.

Phosphate: standard advice.

Potassium: standard advice + 25%.

Seed treatment

Desprouting more than once can have a negative impact on yield and size regularity. A short heat shock or proper pre-sprouting is recommended.

Planting distance

28/35 mm: 25 cm (54.000 plants/ha)

35/50 mm: 33 cm (40.000 plants/ha)

50/55 mm: 39 cm (33.000 plants/ha)

Weeds

A standard use of metribuzin (Sencor), before or after emerge, can give some foliage reaction, but rarely any yield reduction.

Fungicides

A strict preventive spraying schedule against late blight is necessary.

Harvest

Due to its sensitivity scores for black spot and/or harvest damage, wait at least two weeks after haulm killing before harvest.

Storage - .

Preferred storage temperature is 5 °C. For processing purposes, do not store below 7 °C. Suitable for medium to long term storage.

¹ Level of fertilization is based on soil analysis.
