## Fertilization <sup>1</sup>

**Nitrogen:** standard advice. Preferably a high initial application, a second treatment is optional.

**Phosphate:** standard advice.

**Potassium:** standard advice.

## Seed treatment

Desprouting can have a negative impact on yield and size regularity.

## Planting distance

28/35 mm: 27 cm (50.000 plants/ha)

35/55 mm: 33 cm (40.000 plants/ha)

50/55 mm: 40 cm (33.000 plants/ha)

<sup>1</sup> Level of fertilization is based on soil analysis.

## Weeds

Do not use metribuzin (Sencor), as it gives a severe foliage reaction and a serious yield reduction.

## Fungicides

A strict preventive spraying schedule against late blight is necessary.

## Harvest

Due to its sensitivity scores for black spot and/or harvest damage, wait at least three weeks after haulm killing before harvest.

## Storage - .

Preferred storage temperature is 5 °C. For processing purposes, do not store below 7 °C. Suitable for medium term storage.

Say potato,  
say **Agrico.**
